

# CHANGE CC#

The CHANGE CC# Max for Live device lets you change incoming MIDI CC (Control Change/Continuous Control) messages to a different controller number.

Just drop it on a MIDI Track in Ableton Live where you are receiving MIDI CC messages, switch on one row for each CC controller number and select the CC#-In for the receiving number. You can then select the controller number in the CC#-Out section to switch to sending out to. If you want to send the original CC# out as well, just switch on the "Through" function for the dedicated row(s).

*Note: You can only select the same CC#/controller number for each device once but if you want send/switch one CC# coming in to multiple CC# just use more plural devices with the "Through" function one after another.*

CC# In + Out      Activate "Through" if original CC# should be send out as well

Switch for each row

Switch	CC#-In	CC#-Out	Through
<input checked="" type="checkbox"/>	2	127	Through
<input type="checkbox"/>	21	0	Through
<input type="checkbox"/>	0	20	Through
<input type="checkbox"/>	0	20	Through
<input type="checkbox"/>	0	20	Through
<input type="checkbox"/>	0	20	Through
<input type="checkbox"/>	0	20	Through
<input type="checkbox"/>	0	20	Through

IN-Monitor

CC# Val.

Activate "IN-Monitor" to detect on which CC#/Values MIDI CC is being received
