

Velocity to Note Length Scale

The "Velocity to Note Length Scale" device lets you scale the incoming velocity to a set duration.

INPUT VELOCITY RANGE

Set the output velocity here. Select here the minimum and maximum values for the "Velocity to Duration" operation. Incoming velocity values under/above the selected Min/Max values will be passed through but the duration will be 'compressed' and set to the "Min/Max" values you set for duration.

DURATION MODE

Select here between "Time" and "Note" mode. "Time" lets you input values in milliseconds. "Note" lets you input note values which will be relative to the set master tempo.

Min/Max Range

Defines the range of duration the incoming velocity will be scaled to.

VELOCITY INPUT MONITOR

All MIDI notes ON velocity will be shown here.

DURATION OUTPUT MONITOR

The created duration for the notes out will be shown here.
